

LIFECHECK HY-GENE TESTING

ENVIRONMENTAL & INDUSTRIAL HYGIENE TESTING SERVICES

OSP LifeCheck Hy-Gene offers industry recognized ATP testing technology. Our advanced lab, years of experience in microbiology, comprehensive approach to data analysis and deep focus on collaboration ensures we deliver tangible solutions, every time. As such, we are redefining the customer experience and driving industry standards in response to the global need for data-supported back to business protocols, and ongoing safe work environment programs.

OSP's LifeCheck Hy-gene Test Kits, complete with all consumables, provide businesses the opportunity to test and validate cleaning protocols, delivering peace of mind for stakeholders.

LIFECHECK ATP HYGIENE TEST KITS

Trusted ATP testing technology for determining total active microbes is available as a complete in-house package with equipment, or as a lab submission sample kit. Multiple areas of a workplace or public environment can be sampled and compared to ensure cleaning protocols and cleaning agents are effective. This test reports a quantity of microbes so that effective kills from cleaning protocols can be demonstrated. Hard to clean surfaces, high use surfaces, or baseline cleanliness levels can all be determined by using this technology.

IN-HOUSE ATP TEST PACKAGE:

Includes swabs, reagents, and equipment, allowing testing to be done completely on site, generating results in 10 minutes. Our staff will train clients on equipment use, swabbing & processing and be available for on going support at anytime. This package is ideal for large facilities, service or management companies with multiple sites, or complex sites with high testing volumes.

LAB SUBMISSION ATP TEST KIT:

Provides swabs and reagents in 5, 25 or 50 tests per kit, to be sent in to the OSP lab for processing after use. These kits are easy to use, and results are emailed to the address provided. Swab, seal and send!

HOW IT WORKS:

1 REQUEST A LIFECHECK TEST KIT

Our Technical Team will mail you an easy to use LifeCheck ATP Hygiene Test Kit. The team can answer questions, provide training, and guide you through using the kits.

403.291.1658 (Canada) | 281.497.2692 (USA)

lifecheck@ospmicrocheck.com

2 COLLECT SAMPLE

When the kit arrives, follow the included sampling instructions. Testing is for environmental samples only. Human or clinical samples are strictly prohibited. Return the swab sample into the provided vial, fill out the submission form and return mail the sample to our OSP Technical Centre.

Samples should ideally be submitted within 24 – 48 hours of collection.

3 RECEIVE REPORT

The OSP Technical Centre will complete diagnostics and send resulting report to the email on your submission form.
